MOHD ZAID

FULL STACK SOFTWARE ENGINEER • AI/GENAI • BACKEND • CLOUD

+91 9795372555 • razvizaid259@gmail.com • Portfolio • LinkedIn • GitHub

PROFILE

Full Stack Software Engineer focused on backend systems, AI-powered products, cloud infrastructure, and production-grade web applications. Experienced across MERN, React, Next.js, Node.js, Fastify, PostgreSQL, MongoDB, Redis, Docker, Azure, AWS, CI/CD, multi-tenancy, authentication, and AI/RAG systems.

EXPERIENCE

PGC Digital | Full Stack Developer | 10xTA ***Oct 2025 – Present***

- Contribute across a multi-service recruitment platform spanning **2 client applications**, gateway, APIs, read services, and **4+ supporting backend services**.
- Build backend APIs with Fastify/Node.js, PostgreSQL, Drizzle, and Redis; own resource contracts, validation, JSON Patch workflows, and service boundaries.
- Implement **multi-tenant data isolation** with PostgreSQL Row-Level Security, tenant-context propagation, least-privilege roles, and read-only database access.
- Work across Azure Entra authentication, authorization, gateway routing, CORS, request headers, and **401/403 debugging end-to-end** from client through database.
- Develop Docker-based local environments and GitHub Actions pipelines covering typecheck, lint, test, build, and environment-specific deployment workflows.
- Integrate **3 AI-driven recruitment workflows** spanning resume ranking, resume extraction, and AI interviews into a distributed product architecture.

Freelance | Full Stack Developer ***Prior***

- Delivered **10+ web projects** for **5+ international clients**, owning development from requirements and architecture through deployment and handover.
- Worked directly with international clients on requirements, technical decisions, implementation, API integration, testing, deployment, and post-delivery fixes.
- Delivered independently across modern JavaScript/TypeScript stacks while managing scope, timelines, communication, and end-to-end technical ownership.

Intelliprompt | Backend Developer ***May 2025 – Jul 2025***

- Built REST APIs for prompt creation, enhancement, and versioning across **8+ AI models** including OpenAI, Claude, and Gemini.
- Improved prompt-search performance by **3×** through targeted MongoDB indexing and query optimization.
- Implemented Clerk authentication, Razorpay payments, validation, encrypted cookies, Redis caching, and rate limiting.
- Built a hybrid-rendered landing experience that contributed to **600+ early signups**.

PROJECTS

Docly | AI Document Chat ***Node.js, Express, MongoDB, AWS S3, BullMQ, Redis, OpenAI Embeddings***

- Built an AI document-chat system for multi-document upload, asynchronous processing, semantic retrieval, and grounded LLM responses.
- Designed an ingestion pipeline using AWS S3 + BullMQ/Redis and generated **1536-dimensional embeddings** for vector retrieval.
- Implemented conversational context using the latest **5 messages** and an LLM response layer for document-aware answers.

SKILLS

Languages	TypeScript, JavaScript (ES6+), Python, C
Frontend	React.js, Next.js, Redux, Tailwind CSS
Backend	Node.js, Fastify, Express.js, REST APIs
Data	PostgreSQL, MongoDB, MySQL, Redis
AI / GenAI	LLMs, RAG, Embeddings, Vector Search, OpenAI, OpenRouter
Cloud / DevOps	Docker, Docker Compose, Azure, AWS S3, GitHub Actions, Vercel, CI/CD
Security	OAuth 2.0, OIDC, JWT, Azure Entra, RBAC, PostgreSQL RLS, CORS
Engineering	Git, GitHub, Postman, Drizzle, BullMQ, Vitest, Jest, MCP

EDUCATION

Bachelor of Computer Applications | Indira Gandhi National Open University | 2025

Intermediate | Lucknow Public School • CBSE Board

CERTIFICATIONS

Career Essentials in Generative AI | Microsoft & LinkedIn | Generative AI applications and ethical practices

Introduction to Cyber Security | Infosys Springboard | Cybersecurity fundamentals, risk management, and threat prevention
